

ABSTRACT OF THE DISCLOSURE

An FX server, in which an effect engine, Java applet, and effect data are stored, is connected to the Internet via
5 a web server. A user terminal accesses the FX server via the Internet and downloads the effect engine and the Java applet
to the user terminal. The Java applet starts the effect engine,
which selects desired data from a plurality of effect data
pieces, downloads the selected effect data, and adds an effect
10 corresponding to the selected effect data to digital data saved
on the user terminal.
